                                                                                                   Ś
                                                                                                                            밁
                                                                                                                                                                            밁
                                                                                                                                                                                                  ş
                                                                                                                                                                                                                             B
                                                                                                                                                                                                                                                    Ś
                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated nucleic acid molecule (ADN62574), CC which encodes the mature form of a polypeptide capable of binding human CL II-13 (interleukin I3) and/or binding human IL-4 (designated II-13 CC receptor alpha 1 subunit) appearing as ADN62575. Also included are a vector comprising the nucleic acid molecule and a host cell comprising CC the vector. The nucleic acids are useful as probes or primers or in the CC analysis of allelic variation. The polypeptides are useful for binding CC human IL-13 and/or binding human IL-4 and act as inhibitors by CC interfering with the interaction between human IL-13 or IL-4 and their CC natural receptors. They can also be used in medicine: e.g. for treatment CC of diseases such as atopy, atopic dermatitis, allergy, rhinitis, eczema, CC asthma, AIDS, cancer, inflammatory disease (e.g. rheumatoid arthritis and CC asthma, AIDS, bowel disease), multiple sclerosis, Alzheimer's disease, CC Lupus erythematosus, thyroiditis, diabetes, uveitis, psoriasis, CC urticaria, nephrotic syndrome, glomerulonephritis, ulcerative colitis, CC urticaria, nephrotic syndrome, toxoplasmosis, listeriosis, leprosy, Lyme disease, tuberculosis, malaria and leichmaniasis. They can also be CC used for producing antibodies, which can be used for diagnosing diseases. The present sequence encodes IL-13 receptor alpha 1 subunit.
                                                                                                                                                                                                                                                                               Query Match

                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                CC oligonuclectide (ON) with low adenosine (up to 15%), which targets conclude condition (on the composition) allergies, and/or CC inflammation. The ON can have antiinflammatory, antiallergic, and/or CC inflammation. The ON can have antiinflammatory, antiallergic, and/or CC inflammation. The ON can have antiinflammatory, antiallergic, and/or CC inflammation, the treatment of diseases associated with inflammation, CC impaired airways, including lung disease and diseases whose secondary CC effects afflict the lungs of a subject. They can be used for treating CC e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma, complete respiration, respiratory distress syndrome, pain, cystic CC impeded respiration, respiratory distress syndrome, pain, cystic CC impeded respiration, respiratory distress syndrome, pain, cystic CC indepeded respiration, respiratory distress syndrome, pain, cystic CC carcinomas, and cancers which may metastasise to the lungs, including CC carcinomas, and cancers which may metastasise to the lungs, including CC carcinomas, and cancers which may metastasise to the lungs, including CC construction of decoxyadenosine which activates adenosine receptors causing CC prometrion, which correspond to SEQ ID NO:11 to AAA35312 represent the CC invention, which correspond to SEQ ID NO:11 to 2815, and then the last 185 content of previously named sequences. SEQ ID NO:11 to 1680 (AAA32323 to AAA3992) are specifically claimed ONs from the present invention on the match CC up with their corresponding SEQ ID NO: sequences given in the sequence cC listing from the present corresponding SEQ ID NO: sequences given in the sequence cC listing the corresponding SEQ ID NO: sequences given in the sequence cC listing the corresponding SEQ ID NO: sequences given in the sequence cC listing the corresponding SEQ ID NO: sequences given in the sequence cC listing the corresponding SEQ ID NO: sequences given in the sequence cC listing the corresponding SEQ ID NO: sequences given in the sequence corresponding

The present invention describes low adenosine (A) content antisens#
CC oligonucleotides and compositions (I) comprising them. In the anti#ense
CC (I) can have respiratory, bronchodilator, antiinflammatory, analgesic,
CC (I) can have respiratory, bronchodilator, antiinflammatory, analgesic,
CC The antisense oligonucleotides and (I) can be used to down-regulate the
CC expression and or activity of target polypeptides associated with;
CC lung/respiratory disorders and malignancies, such as stimulating and
CC chemokines, endogenously produced specific and non-specific enzymes,
CC chemokines, inding proteins, adenosine receptors, bradykinin receptors, cytokine and
CC chemokines, inding proteins and malignancy associated proteins. The
CC condition specific may be used in this way to treat disorders
CC receptors, binding proteins and malignancy associated proteins. The
CC including respiratory obstruction (especially pulmonary obstruction
CC surfactant hypoproduction which are associated with a disease or
CC condition selected from pulmonary vascocnstriction, inflammation,
CC allergies, asthma, impeded respiration, respiratory distress syndrome
(RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary
cystic fibrosis (CF), allergic rhinitis (AR), pulmonary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 13

The present invention describes a method (M1) for screening for an anti-
cone plastic agent. The method involves exposing cells to a chemical agent
to be tested for anti-neoplastic activity, determining a change in
comprises a sequence (S) selected from 847 sequences (given in ABL61664
comprises a sequence (S) selected from 847 sequences (given in ABL61664
comprises a sequence (S) selected from 847 sequences (given in ABL61664
comprises a sequence (S) selected from 847 sequences (given in ABL61664
comprises a sequence (S) selected from 847 sequences (given in ABL61664
comprises a sequence (S) selected from 847 sequences (given in ABL61664
comprises a sequence (S) selected from 847 sequences (given in ABL61664
comprises a sequence (S) selected from 847 sequences (given in ABL61664
comprises a sequence (S) selected from 847 sequencing a product which is
comprises in indicative of anti-neoplastic agent as a result
comprises a sequence (S) selected which respect to the anti-neoplastic agent as a result
comprises of the data is sufficient to convey the chemical structure and/or
properties of the agent. M1 can be used in the treatment of cancer such
as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney,
corrective or panoreatic cancer, adenocarcinoma, carcinoma, clear cell
cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's

(GENE-)

GENE LOGIC INC

CC (WAA), by detecting the level of expression of gene(s) (GS), identified by CC (C), and comparing the expression level to an expression of gene(s) (GS), and comparing the CC expression level to an expression level in an unactivated GC, where CC differential expression of GS is indicative of GCA. Also included are CC tasue, an alteract compable of modulating GCA or an inflammation (especially chronic) in a CC tissue, an altergic response in a subject, exposure of a subject to a CC pathogen or sterile inflammatory disease using the gene expression of the gene in inflammation (especially chronic) in a CC tissue, an altergic response in a subject, exposure of a subject to a CC pathogen or sterile inflammatory disease, by detecting the level of expression in a sample of the tissue of gene(s) from Gs, where the level of expression of the gene is indicative of inflammation; (4) treating CC (MS) an inflammation (especially chronic) in a CC inflammatory disease, by contacting a tissue having Gis in the tissue, an altergic response in a subject, exposure of a subject to a pathogen or sterile inflammation in a tissue; Al is useful for modulating GA; MJ is useful for screening an agent capable of modulating GA preferably in an CC inflammation in a tissue; Al is useful for detecting GA; MJ is useful for screening an inflammation with an altergic response in a subject, capable of modulating GA preferably in an inflammation with an inflammation with an altergic response in a subject, capable of modulating GA preferably in an inflammation with an altergic response in a subject, capable of modulating GA; MJ is useful for detecting an inflammation with an altergic response in a subject, capable of modulating GA; MJ is useful consists, remained by a contacting GA; MJ is useful for careful and the consisting of the subject, capable of modulating GA; MJ is useful for treating one of the above of the subject in the present sequence represents a gene differentially capable of the consisting of the above of the consisting for the su invention relates to by detecting the level of detecting (M1) granulocyte expression of gene(s) C) activation (Gs) identified γď

Submitted (05-JAN-2005) Biological Chemistry and Molecular Pharmacology, Harvard Institute of Proteomics, 320 Charles St., Cambridge, MA 02141, USA This CDS clone is a part of a collection of human full-length expression clones generated by Harvard Institute of Proteomics. This ORF clone has been cloned without stop-codon (to allow fusion with C-terminal tag). The CDS has been directionally cloned using BD In-Fusion(TM) cloning system between the SalI and HindIII sites of the pDNR-Dual vector. Additional sequences in the clone: 'ACC' after SalI site and before 'ATG' to provide Kozak consensus sequence; 'GG' after last codon and before HindIII site to maintain reading frame. Each clone is clonally isolated and full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              2 (bases 1 to 1284)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

REFERENCE AUTHORS REFERENCE AUTHORS VERSION KEYWORDS SOURCE RESULT 1 CR603161 LOCUS ORIGIN FEATURES COMMENT ACCESSION DEFINITION TITLE JOURNAL TITLE JOURNAL ORGANISM REMARK source 1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. Direct Submission Submitted (20-JUL-2004) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr Contact : Feng Liang Email : fliang@lifetech.com URL : http://fulllength.invitrogen.com/ InVitroGen Corporation 1600 Li,W.B., Gruber,C., Jessee,J. and Polayes,D. Web: www.genoscope.cns.fr
1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
11048.f
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AL543336 Homo sapiens PLACENTA COT 25-NORMALIZED Homo sapiens cDNA CLONE CSODIO01YN10 5-PRIME, mRNA sequence.
